

# Melbourne Laser & Aesthetic Centre

Melbourne Laser & Aesthetic Centre was established in 1990 by co directors and senior Dermal Clinicians; Ms Tania Caputo and Ms Tania Fognini. Over the past 23 years the company has grown to become one of the most reputable cosmetic Laser clinics in Melbourne offering cosmetic treatments in the CBD to local, national and international clientele.

Today, the Melbourne Laser & Aesthetic Centre offers a specialised team of medical professionals: Laser therapists, Dermal Clinicians, and Cosmetic Nurses, working in collaboration with leading female Plastic & reconstructive surgeon, Dr Niamh Corduff. Directors Tania Caputo and Tania Fognini lead the MLAC team who are highly experienced and university educated with a Bachelor in Health Science specialising in laser treatments and aesthetic technologies for cosmetic enhancement, skin rejuvenation and scar reduction.

The centre is equipped with a large range of specialty medical grade Lasers and IPL technologies, with clinical treatments aimed to rejuvenate, correct skin conditions and enhance overall appearance. The clinic offers advanced laser technologies which are able to be used on all skin colours, from very pale to very dark including Indian and African-American skin colours. Melbourne Laser and Aesthetic Centre offers the most advanced scientifically proven non-surgical cosmetic and laser skin and body treatments available.

Over the past 10 years scarring has become one of the centre's areas of specialty. Scar reduction and remodelling is a specialised area of practice incorporating various modalities. Scars may be treated with fractionated laser resurfacing and fractional radio frequency treatment, skin needling. Specific laser technologies are also incorporated which target various colours within scars to achieve a more uniform skin colour.

There are many different types of scars, with different causes and origins, and each scar is treated individually based on a comprehensive assessment by the treating practitioners. The dermal clinician's experience in treating scarring is essential in obtaining optimal results. Both MLAC directors have not only had extensive experience, they have developed clinically proven methods in treating all types of scarring. Tania and Tania have been pioneers in many cosmetic methods used in aesthetic practice. Originally renowned for their pioneering practices in Photo rejuvenation, plus more recently with collagen induction therapy and now again with their scar revision methods, surpassing any conventional methods being used today. All patients are assessed, consulted and reviewed by either Ms Tania Caputo or Ms Tania Fognini throughout their individualised scar remodelling program.

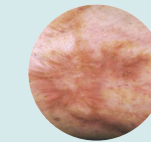

"Often a person may present with different scars so various modalities are required to achieve optimal results." It is essential that we consider not only the type of scar but we address what aspect of the scar is of concern, for example; it may simply be the colour or the texture, thickness, indentation, etc." explains Tania Fognini. All scars whether old or new, can be treated. Consultation appointments can be made without referral, contact 03 86865786.

## TYPES OF SCARRING TREATED

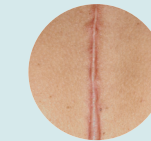

### ATROPHIC SCARS

- indented, pitted or sunken scars

### CONTRACTURE SCARS

- occurs frequently after burns, affects movement in and around the area.

### HYPERTROPHIC SCARS

- often red, raised scars and regularly mistaken for keloid scars.

### KELOID SCARS

- often red, thickened mass of fibrotic tissue which overgrows beyond the original injury.

### STRETCH MARKS

- occurs when the skin is stretched rapidly; such as teenage growth spurt, pregnancy or simply weight gain.

### ACNE SCARS

- most commonly indented, raised and/or pigmented.

### TRAUMATIC AND BURN SCARS

- acquired through accidents and burns

### SURGICAL SCARS

- usually fairly undetectable but may result in red or hyper pigmented, thickened and rope-like scarring.
